Management Information

Name

Withdraw Money

Synopsis

This use case allows a customer to withdraw cash from their bank account using an ATM.

Environment

Actor

Customer

Postconditions

- The bank card is valid.
- The account associated with the card is active.
- The entered PIN is correct.
- The account permits cash withdrawals.

Output

- Cash
- Bank card
- Transaction receipt, if requested

Preconditions

- The bank card is valid.
- The account associated with the card is active.
- The entered PIN is correct.
- The account permits cash withdrawals.

Input

- Bank card
- PIN
- Withdrawal amount
- Receipt selection

Scenarios

Normal Scenario

1. The customer inserts their bank card into the ATM.
2. The ATM requests the customer's PIN.
3. The customer enters the PIN.
4. The ATM verifies the PIN.
5. The customer selects "Withdraw Money".
6. The ATM asks for the withdrawal amount.
7. The customer enters or selects an amount.
8. The ATM verifies that the account has sufficient funds and that the amount is within the withdrawal limit.
9. The ATM deducts the amount from the customer's account.
10. The ATM dispenses the requested cash.
11. The ATM asks whether the customer wants a receipt.
12. If requested, the ATM prints the receipt.
13. The ATM returns the bank card.
14. The transaction is completed.

Exception Scenarios

- **At step 6:** If the entered amount cannot be dispensed using the available banknotes, the ATM informs the customer and asks for another amount. The use case continues at step 5.
- **At step 7:** If the requested amount exceeds the customer's daily withdrawal limit, the ATM informs the customer and asks for a lower amount. The use case continues at step 5.
- **At step 10:** If the customer does not request a receipt, step 11 is skipped.

Error Scenarios

- **At step 7:** If the account has insufficient funds, the ATM does not perform the withdrawal. The customer may enter a different amount or cancel the transaction.
- **At step 7:** If the ATM does not contain enough cash to dispense the requested amount, the withdrawal is not performed. The customer may enter a different amount or cancel the transaction.
- **At step 8:** If the transaction cannot be authorized by the bank, no money is deducted and no cash is dispensed.

Additional Information

Nonfunctional Requirements

- The ATM shall respond to customer input within 2 seconds under normal operating conditions.
- The ATM shall not display the customer's PIN.
- Cash shall only be dispensed after the withdrawal has been authorized.
- The ATM shall prevent unauthorized access to account information during the transaction.

Business Impact

Impact: 9

Reason:

If cash withdrawal is non-operational, customers cannot access cash through the ATM and must use another ATM or another banking service. Failed or incorrectly processed withdrawals may also result in financial discrepancies.

Contact

ATM / Banking System Product Owner

Remarks

None.
